A MESSAGE FROM THE COMMISSIONER

"KENTUCKY SOIL TOUCHES ALL OF US"

My term as Commissioner of Agriculture for Kentucky will soon be over. I want to thank you for the opportunity to serve you the last four years. These have been difficult economic times in agriculture. The marketplace has not furnished a fair return to Kentucky farmers; and when the farm economy struggles, the entire community suffers. Our theme, "Kentucky Soil Touches All of Us," is indeed a truth.

During my term as Commissioner, I have benefitted from an increased awareness of the need for agricultural statistics to measure the present and for comparison to the past. Agricultural numbers are an essential ingredient to ensure that decisions are based on facts. This publication is a summary of State and County data for agricultural commodities produced in Kentucky.

The Kentucky Agricultural Statistics Service prepares these numbers, but I want to thank you farmers, county agricultural extension agents, auction markets, dairy plants and other members of the agricultural community who provide the basic information. All this data is received on a voluntary basis, tabulated and summarized into meaningful agricultural numbers.

Field crops, livestock, dairy and poultry are still the primary sources of income on the farm. However, I am excited about the efforts being made to develop more diversification in farming. Market development is a slow and tedious process, but the Department of Agriculture has accepted the challenge to continue efforts for new agricultural industry. No single product seems to be the answer, but many new ideas will help fill the current income gap being felt by many Kentucky farmers.

I want to thank everyone who contributed to this publication, and I am glad to have had the opportunity to assist in presenting these agricultural statistics.

Sincerely,

David E. Boswell

DAVID E. BOSWELL
Commissioner
Department of Agriculture

FOREWORD

"Challenge of Change" are buzz words for 1987. Agriculture in the 1980's has experienced tremendous change presenting a great challenge to Farmers, Agri-business, Bankers, etc. The Kentucky Agricultural Statistics Service has the responsibility to measure many of these changes. A wide range of agriculture statistics are presented in this publication. Looking at agricultural numbers for county, State and Nation exemplifies the changes that do occur from decade to decade and one generation to another.

Farm numbers were pegged at 99,000 in 1986 - down 65 percent from 1935. This means nearly 2 out of 3 farms are gone from 50 years ago. Prior to 1965, Kentucky farmers had never grown over 300,000 acres of soybeans; however, since 1973 Kentuckians have never grown less than a million acres and peaking at 1,720,000 acres in 1979. As soybean acres increased, corn acres generally decreased. Tobacco production has been comparatively stable, although farmers are setting considerably less acreage than they did 50 years ago. Yields increased steadily under the acreage allotment, but under the poundage quota system yields have declined or leveled off. Livestock numbers have shown some almost unbelievable shifts. Even as late as 1935 Kentucky had 1.1 million head of sheep. This compares to January 1, 1987 numbers of only 32,000 head. Hopefully the sheep industry is making a comeback as the 1987 number is 19 percent above a year earlier. Cattle numbers trended upward peaking in 1975 at 3.75 million head. Since then cattle numbers have declined 35 percent and currently stand at 2.45 million. Land prices have been on a roller coaster and commodity prices have had wide swings. Yes, there have been many changes in agricultural numbers and our challenge is to track and measure these statistics.

The loss of farms and the change in make-up of the remaining farms has necessitated new methodology in gathering statistics. A generation ago Kentucky farms were homogeneous in nature. A typical farm had a few chickens, cows, hogs, tobacco, corn, etc. Agricultural estimates could be generated from a cross section of these farms. Today, farms are specialized. As a result of farm changes, our survey samples had to be changed. Probability sampling

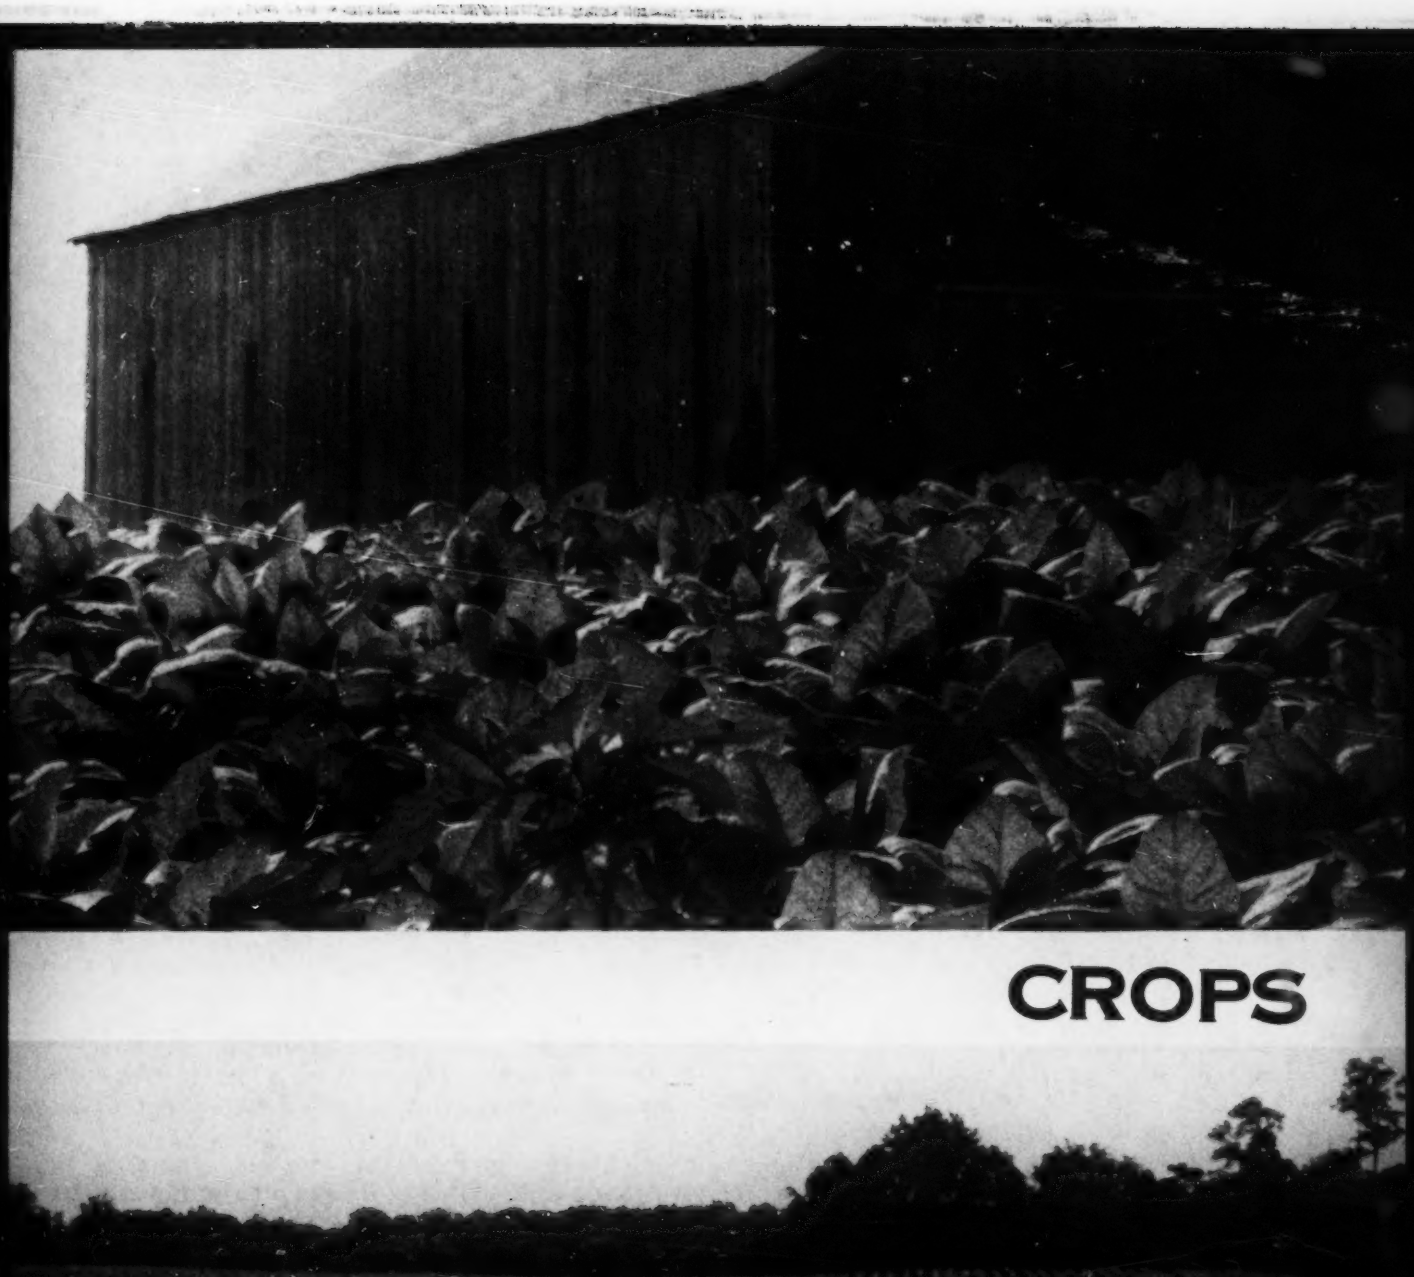
where we can measure the sampling error of the indication is now used for all major crop, livestock, and price surveys. New probability surveying procedures do require more frequent contact with large Kentucky operators. We try to compensate for any inconvenience by returning timely and accurate information. All agricultural statistics reports are available free of charge to any Kentucky farmer.

We would be remiss not to acknowledge the excellent cooperation and support given this office by Commissioner David Boswell and the Kentucky Department of Agriculture. The Kentucky Agricultural Statistics office is uniquely a State-Federal operation designed to generate agricultural statistics at minimum cost. Publication of this bulletin is made possible by funds provided by the Kentucky Department of Agriculture. And finally, thank you Kentucky farmers and agri-businesses for your voluntary cooperation to our surveys. You make these numbers possible. This is my 10th year as State Agricultural Statistician and I am truly grateful for your cooperation and kindness despite the very difficult economic climate which surrounds agriculture.

Respectfully,

Dave Williamson

DAVID D. WILLIAMSON
State Agr'l Statistician



CROPS

1986 CROP HIGHLIGHTS

HARVESTED CROP ACREAGE

Kentucky farmers harvested 5.2 million acres of field crops and hay in 1986, a 5 percent drop from the 1985 total, and 8 percent below 1984. Acreages fell for all the State's major crops except alfalfa hay.

BURLEY TOBACCO

Burley tobacco production in Kentucky totaled 287 million pounds in 1986, a decline of 27 percent from 1985 and the lowest burley output for the State since 1943. Lower marketing quotas caused growers to set fewer acres and reduced yields added to the drop in production. Harvested acreage fell to 140,000 compared to 170,000 acres a year earlier while yield per acre averaged 2,050 pounds, down 275 pounds from 1985. Fayette County was the State's leading producer with 8.0 million pounds. Second-ranked Barren County produced 7.9 million pounds. Shelby, Woodford, and Bourbon Counties rounded out the State's top five producers.

Most areas of the State experienced less than ideal weather conditions during the 1986 growing season. Dry spring weather slowed germination and growth in plant beds and a late April freeze caused some plant damage. Transplanting got underway in mid-May, but progressed slowly due to the small plant size and dry field conditions. In late May and early June, rainfall was plentiful, restoring soil moisture but causing further delays. Setting advanced rapidly as weather and plant supplies improved and by June 30, most of the State's burley had been set. However, some fields were not set until mid-July.

Hot, dry weather prevailed during most of July and August. During this period, the burley crop was rated in mostly fair condition. Scattered rainfall brought relief to some areas, but soil moisture was generally short to very short throughout the primary producing regions. The dry weather caused many fields to bloom early and at a short height. Early set fields tended to produce the best crops, but late August rains did stimulate growth on the later set tobacco. The dry weather helped hold down disease problems. Insect problems were generally light to moderate.

A few early fields were cut by August 1, and harvest was active Statewide by mid-month. However, some fields were not topped until after September 1 and the harvest season stretched well into fall. A few late fields were not cut until early October. The crop cured well and stripping was underway by October 1. Leaf quality was variable but mostly good. Burley markets opened November 24 with a generous supply of tobacco available. The 1986 burley tobacco crop averaged $156.80 per cwt., down $3.10 from 1985 and $31.60 below 1984. The 1986 crop was valued at $450 million, down 29 percent from 1985 and the lowest since 1973. Kentucky's burley tobacco crop value peaked at slightly over $1 billion in 1982.

DARK FIRED AND DARK AIR-CURED TOBACCOS

Production of dark type tobaccos in Kentucky fell for the second consecutive year. Lower harvested acreage and lower yields for two of the four types grown in the State caused the drop. Later maturing dark tobaccos received a substantial boost from late season rains or declines would have been greater.

Type 22, Eastern Dark Fired, production totaled 8.7 million acres, down 18 percent from 1985. Yield per acre averaged 1,985 pounds, down from 1985's record high 2,045 pounds. Harvested acres dropped 15 percent to 4,400 acres. The top producing counties were again Christian and Trigg. Growers received an average $144.60 per cwt., down from $146.00 for the 1985 crop.

Type 23, Western Dark Fired, production was virtually unchanged from 1985 at 9.6 million pounds. Harvested acres dropped 400 acres to 4,300, but the crop yielded a record 2,240 pounds per acre to offset the acreage decline. Graves and Calloway Counties were the leading producers. Prices averaged $145.90, down slightly from $146.00 in 1985.

Type 35, One Sucker Dark Air-Cured, tobacco growers produced 5.8 million pounds of leaf, down 31 percent from 1985. Harvested acres totaled 2,900 compared to 4,100 in 1985 and yield fell 50 pounds to an average 2,000 pounds per acre. The leading producing counties were Logan and Graves. The average price fell $6.60 to $121.90 per cwt.

Type 36, Green River Dark Air-Cured, tobacco yielded a record 2,220 pounds per acre on 1,700 acres harvested. The resulting production of 3.8 million pounds was 16 percent below 1985. Daviess and McLean Counties again led the State in production. Growers received an average $115.40 per cwt. compared to $119.00 a year earlier.

CORN

Kentucky farmers produced 139.8 million bushels of corn in 1986, 12 percent less than the record high 159.1 million produced in 1985. Planted acreage, at 1,730,000, was the highest since 1959, but dry weather and resulting lower yields caused more than the normal acreage to be cut for silage, used as forage or abandoned. Farmers harvested 1,520,000 acres for grain, down 3 percent from a year earlier, but still the second highest harvested acreage since 1960. Yield averaged 92 bushels per acre, down 10 bushels from 1985. Acreage cut for silage jumped 15 percent to 190,000 acres, second only to the 234,000 acres cut in 1983.

The State's top three corn grain producing counties were unchanged from 1985. Union County farmers produced 9.8 million bushels on 78,500 acres. Henderson County ranked second with 8,305,000 bushels on 75,500 acres and Daviess County was a close third at 8,303,000 bushels of corn grain. Christian and Graves Counties rounded out the top five. Union County also recorded the State's highest average yield of 125 bushels per acre. Daviess and Hickman Counties tied for second at 115 bushels.

Warm, dry weather allowed field preparation and corn planting to progress at a near-record pace. Planting was active by the first week of April and by April 13, a few western and south-central counties were nearing completion. Dry field conditions slowed germination and some farmers delayed plantings until additional moisture was received. Weeds were also a problem as the dry conditions hampered herbicide effectiveness. Widespread rains in late May and early June boosted growth. However, hot, dry weather moved into the State as much of the acreage began silking and persisted over much of the summer. High temperatures hindered pollination and kernel development. Later planted fields suffered the worst damage.

Corn grain harvest began early with a few fields harvested by August 10. Harvest was active by September 1 and progressed at a near-record pace throughout the fall. This was in sharp contrast to the slow harvest progress in 1984 and 1985. By November 2, 87 percent of the State's corn had been harvested with harvest virtually finished in many western and west-central counties. Wet conditions slowed progress somewhat in mid-November.

SOYBEANS

Soybean production in Kentucky fell 10 percent from 1985 to a total 37.4 million bushels in 1986. Harvested acreage, at 1,170,000 acres, was down 5 percent from a year earlier. Yield per acre averaged 32 bushels compared to a record high 34 bushels the previous year.

Henderson County replaced Logan as the State's leading soybean producer in 1986 with 2.8 million bushels. Daviess County was ranked second with 2.7 million bushels and Logan County fell to third. Graves and Christian Counties were ranked fourth and fifth, respectively.

Planting of single crop soybeans began in a few areas in early May and advanced rapidly. Wet conditions slowed progress in late May and early June, but the rains restored moisture needed for double crop soybeans. Activity picked up as fields dried and by June 30, 85 percent of the State's soybeans were planted compared to 78 percent on average. Planting was virtually complete by July 13. The crop developed rapidly, but was stressed by the hot, dry weather during June and July. Early soybeans suffered the least damage, but later plantings received a boost from the rains and milder temperatures in late August and September. Harvest was underway in a few areas by mid-September and progressed slowly as late rains kept later fields green and moisture content high. Harvest advanced rapidly as drier weather moved back into the State and by November 17, 70 percent of the acreage had been harvested.

OTHER CROPS

Wheat production in Kentucky during 1986 totaled 8.9 million bushels, 15 percent lower than a year earlier. Harvested acres dropped 13 percent to 270,000 and yield declined 1 bushel to an average 32 bushels per acre. Logan County moved up from second place to become the State's leading producer with 900,000 bushels. Christian, Graves, Calloway and Simpson Counties rounded out the top five wheat producers. Acreage losses to winter kill were heavy in Central and Bluegrass Counties. Dry weather through most of the spring and a late April freeze caused poor stands and limited growth in many areas. Harvest was underway by mid-June and was nearing completion by July 13.

Kentucky's 1986 hay production was 12 percent lower than a year earlier as the hot, dry summer weather cut yields and reduced the acreage of hay other than alfalfa. Alfalfa hay production totaled 816,000 tons, down 9 percent from 1985. Acres harvested increased to 255,000 acres, up from 250,000 in 1985 but yield fell to 3.2 tons per acre compared to 3.6 tons the previous year. Production of all other hay totaled 2.8 million tons, a 13 percent drop from 1985. Yield declined from 2.0 tons per acre in 1985 to 1.8 tons in 1986 and acreage fell 4 percent to 1.5 million acres. The first hay cutting was reduced by dry spring weather. Rains in late May and early June boosted growth and helped second cuttings in most areas, but as dry weather moved back into the State, prospects again fell. Some hay fields were grazed as dry weather limited pasture growth. Late summer rains helped fall cuttings, but some areas still went into winter with marginal hay supplies.

Grain sorghum production in Kentucky dropped sharply in 1986. A total 4.3 million bushels were produced, less than half the 11.4 million bushels in 1985. Acres harvested fell 60 percent to 57,000 and yield averaged 75 bushels per acre compared to 80 bushels a year earlier. Kentucky grain sorghum acreage had increased for five consecutive years with a dramatic 280 percent increase in 1984.

Barley production fell 42 percent to 527,000 bushels in 1986, the lowest production since 1936. Both acres harvested and yield were down from 1985. Limited amounts of oats and rye were harvested in Kentucky. Most of the acreage sown to these two crops is for a cover crop.

KENTUCKY ANNUAL CROP SUMMARY - 1985 AND 1986

APPLES AND PEACHES

Utilized production of commercial apples in Kentucky totaled 3.9 million pounds in 1986, down drastically from the 15.0 million pounds produced in 1985. Price per pound averaged 20.8 cents, up from 14.1 cents received the previous year. The total value of all utilized production, at $810,000, was less than half of the 1985 total. Nationally, utilized production increased slightly to 7.9 billion pounds and price per pound was up 1.9 cents to 13.6.

Utilized peach production in Kentucky totaled 2.0 million pounds in 1986, compared to no significant production in 1985. The peach crop was hurt by a late freeze in April. Prices averaged 20.4 cents per pound compared to 24.0 cents per pound in 1984. Nationally, utilized production rose 9 percent from 1985 to 2.2 billion pounds, while average price fell from 15.0 cents in 1985 to 14.6 cents per pound in 1986.

WEATHER CROP SUMMARY - 1986

The new year 1986 began in Kentucky with January temperatures averaging slightly above normal at 33.8 degrees. Precipitation, at 1.12 inches, was well below normal for the month with total accumulations making it one of the driest Januarys on record. The warm, dry weather allowed many farmers to finish up harvesting and to begin preparing some land for the upcoming planting season; however, burley tobacco producers had difficulty maintaining their tobacco in good order for stripping and marketing.

February had the largest snowstorm of the winter with snow fall of 6 inches or more being reported on the 14th and 15th across much of the State. Precipitation received during the month made February the wettest of the winter months. Temperatures continued to be unseasonably mild with averages between 3 and 8 degrees above normal. The mild, wet conditions caused some grasses and small grains to begin greening.

Temperatures the first two weeks of March averaged a little above normal. Cold temperatures ushered in spring on March 20 with most areas averaging in the middle teens; however, by the 30th and 31st most areas were seeing temperatures reaching the mid-80's. Rainfall for the month was 2.22 inches below normal, continuing to lower the moisture conditions for spring planting. Burley tobacco markets closed on March 5 to finish the season. Winter kill loss of small grains was considerable in the Bluegrass region.

The last week of April had drastic weather swings setting both cold and warm records. A high of 94 degrees was recorded at Heidelberg and a low of 19 degrees was recorded at the Ashland, Gray Hawk, and Grayson stations. Precipitation for the month was below normal causing soil moisture conditions to become short Statewide by the end of the month. The dry, warm weather allowed farmers to progress with corn planting at a near record rate. Freezing temperatures at the end of the month damaged some early corn, small grains and fruits.

Weather conditions the first two weeks of May continued warm and dry. The final freezing temperature of the season for the State was recorded on the 5th. By the end of the month enough precipitation had been received throughout the State to raise soil moisture supplies to adequate and surplus. The weather station at Rough River Dam recorded almost 9.5 inches of rain during the month. Flooding occurred in some areas with isolated locations receiving hail damage. The weather slowed crop planting considerably; however, due to the excellent progress made in April producers were still ahead of the normal rate in planting progress.

Scattered rain in early June combined with surplus moisture levels to delay planting of crops, transplanting of tobacco and harvesting of grains in the Western half of Kentucky. The remainder of the month had, however, very little rainfall resulting in total precipitation being 1.4 inches below normal. Temperatures were 1.7 degrees above normal for the month, averaging 74.4 degrees. Hopkinsville recorded the high for the month at 100 degrees on the 22nd. Some crops were beginning to show stress by month's end due to the hot and dry weather.

Hot and humid conditions prevailed during most of July with only scattered showers providing relief. Temperatures for the month averaged 3 degrees above normal with Bowling Green, Barren River Lake and Gilbertsville weather stations recording the high temperatures of the year at 102 degrees. Precipitation amounts varied widely across the State ranging from less than an inch to over 10 inches. Statewide, rainfall totals were 0.4 inch below normal. Some producers were having to feed hay to livestock due to the dry conditions in their areas.

Although the month of August was only 0.38 inch below normal in precipitation, it only continued to add to the short moisture conditions for the year. Rainfall for the State through August was nearly 8.5 inches below average. Temperatures for the month averaged 72.9 degrees,

2.4 degrees below normal. Some early corn harvest and cutting/housing of tobacco began during the month; however, crop conditions were variable depending on the amount of moisture that had been received.

Moisture conditions began to improve over the State in September with an average of 4.42 inches being received, 0.9 inch above normal. Temperatures were near normal during the first three weeks of September, while the last week of the month became hot and humid. Monthly average temperature was 2.2 degrees above normal. By the end of the month, tobacco harvest was nearly complete, corn harvest continued at a record pace and producers were beginning soybean harvest in many areas.

The first general frost of the season occurred during the week of October 12th with many stations recording temperatures into the 20s. The average temperature for the month was 58.6 degrees, 1.3 degrees above normal. All areas of the State received near normal precipitation except the West which was 1.5 inches above normal. Statewide, rainfall averaged 3.20 inches, slightly over 0.6 inch above normal. Producers were about to complete corn harvest, while burley growers were beginning to strip the tobacco crop. Field conditions continued favorable for harvesting soybeans and planting of small grains.

November was characterized by nearly normal temperatures and generally above normal precipitation. Temperatures averaged 46.2 degrees and ranged from a high of 80 degrees at Providence to a low of 6 degrees at Ashland. All areas except the West were over 3 inches above normal in precipitation. Snowfall ranged from a trace to less than one-quarter inch. Wet conditions slowed most field activities; however, stripping of tobacco continued with markets opening on the 24th.

Weather for December was cool and dry compared to season norms. Average temperature for the month was 10 degrees cooler than November and less than 1 degree cooler than normal. Average precipitation ranged from under 3.5 inches in the Bluegrass Region to over 4.4 inches in Central Kentucky. The monthly norm is 4.0 inches. Most producers were completing the harvest of this year's crops and preparing for the winter months ahead.

1986 TILLAGE PRACTICES

The use of conservation tillage practices on corn and soybean acreage in Kentucky fell in 1986 from the levels reported in 1983. Information on tillage practices and double cropping was collected on the 1986 June Acreage Survey. Conservation tillage, no till or minimum till, was used on 46.1 percent of the State's soybean acreage in 1986 compared to 51.7 percent in 1983 and 48.3 percent in 1981. Much of this decline is likely due to the drop in wheat acres from 1983 levels. Corn was planted no or minimum till on 43.1 percent of the acreage, down from 44.6 percent in 1983 but up from 34.2 percent in 1981. No till was used on 26.3 percent of the soybean acreage down from 36.0 percent in 1983. Minimum-till acreage went up from 15.7 to 19.8 percent. Corn acreage planted no-till accounted for 19.3 percent of the total, down from 21.9 percent in 1983. Minimum till practices rose to 23.8 percent of the acreage, up from 22.7 in 1983.

The June Acreage Survey indicated 247,000 acres of soybeans were double cropped in 1986, accounting for 20.6 percent of total plantings. In 1983, 38.3 percent, 575,000 acres, were double cropped and in 1981, 40.9 percent of the soybean acreage followed another crop. Most of the double crop acreage, 85 percent, was planted no-till. Double cropping of corn was limited to 3.4 percent of total acreage. Most of the double crop corn is planted in Central and Bluegrass counties and often utilized as silage.

Conservation tillage of sorghum acreage rose slightly from 1983. Survey data for sorghum was somewhat limited, but indicated about 50 percent of the acreage was no or minimum till compared to about 45 percent in 1983.

OFF-FARM GRAIN STORAGE CAPACITY

Capacity of off-farm commercial grain storage in the Nation totaled 9.13 billion bushels on December 1, 1986. This is an increase of 10 percent from a year earlier. Expansion of capacity occurred during the year in 30 States, 10 States registered declines, and 2 States and New England continued unchanged from January 1, 1986. Illinois ranked number one in total storage capacity. It was followed by Iowa, Kansas, Texas, and Nebraska. These top five States together accounted for 53 percent of the Nation's off-farm grain storage capacity. Off-farm storage capacity for Kentucky was up 30 percent from January 1, 1986, and the State ranked 24th among the other States reporting capacity.

State capacity data include all elevators, warehouses, terminals, merchant mills, other storage and oilseed crushers which store grain, soybeans, sunflower seeds or flaxseed.

NUMBER AND CAPACITY OF OFF-FARM STORAGE FACILITIES

1/Data users are advised that some differences may exist between States in the procedure for making counts of facilities in the grain storage universe. In a few instances, the count includes only the headquarters which reports for more than one facility. This does not affect data on total capacity. 2/Includes some temporary storage.

LIVESTOCK

LIVESTOCK HIGHLIGHTS

CATTLE AND CALVES

Kentucky's cattle numbers continued to decline. On January 1, 1987 cattle and calves on farms totaled 2.45 million head, down 1 percent from a year ago and the lowest number since 1966. Cattle numbers peaked at 3.75 million head in 1975 and have trended downward over the past 12 years. The 2.45 million head on farms ranks Kentucky 12th among States. Cows and heifers that calved on Kentucky farms at 1.22 million were up 1 percent from January 1, 1986. Beef cow inventory was up 2 percent from last year, while milk cows at 223,000 head were down 5 percent. This is the lowest inventory of milk cows on Kentucky's farms since 1869 when there were 220,000 head. Beef replacement heifers on January 1 were up 5 percent, milk heifers were down 9 percent. Total heifer inventory was fractionally lower than a year earlier. The 1986 calf crop in Kentucky totaled 1.16 million head, up 5 percent from 1986. Cattle on grain feed for slaughter were estimated at 25,000 head on January 1, down 5,000 head from a year ago. Cash receipts to Kentucky cattle farmers at $397.8 million were up less than 1 percent from 1985. The higher receipts resulted from a 2 percent increase in pounds marketed, while cattle and calf prices remained steady to slightly decreasing.

HOGS AND PIGS

The inventory of all hogs and pigs on Kentucky farms for December 1, 1986 was estimated at 880,000 head. This was up 10 percent from the 800,000 head in 1985 (the lowest end of year hog and pig number since records begin in 1867). Breeding inventory was estimated at 130,000 head, up 5 percent, while market hog inventory was estimated at 750,000 head, up 11 percent. Kentucky farmers farrowed 95,000 sows during December 1985-May 1986 and 105,000 sows during June-November. The 1986 pig crop totaled 1.51 million pigs, up 12 percent from 1985. Pigs saved per litter averaged 7.6. Hog cash receipts at $154.9 million was up 12 percent from a year earlier. The increase resulted primarily from a $5.10 increase per 100 pounds of live animal, as pounds marketed increased less than 1 percent.

SHEEP AND LAMBS

Sheep and lamb inventory on Kentucky farms was up 19 percent on January 1, 1987 at 32,000 head and is the highest inventory level since 1976. Ewes one year old and older totaled 24,000 head, an increase of 2,000 ewes from 1986. The 1986 lamb crop totaled 23,000 head. Cash receipts to Kentucky farmers of $1.10 million were down 9 percent from 1985. Decreased receipts resulted from an 18 percent drop in marketings. Sheep prices did, however, increase $4.00 per 100 pounds liveweight while lamb prices remained steady.

POULTRY

The December 1, 1986 inventory of all chickens (excluding broilers) housed by Kentucky farmers numbered 2.30 million birds, down 31 percent from a year earlier. Hens and pullets of laying age totaled 1.81 million, the same as a year earlier. During 1986 chicken flocks in the State produced 420.0 million eggs, a decrease of 3 percent from 1985 production. Farmers received $19.4 million from the sale of eggs, an increase of 4 percent from 1985. Despite a 3 percent decline in production, cash receipts increased due to a 3.7 cent increase in price received per dozen eggs. The price received per dozen in 1986 was 55.4 cents compared to 51.7 cents in 1985. Broiler production for 1986 numbered 3.01 million birds, down 5 percent from a year earlier. Broiler production was valued at $4.18 million, up 2 percent from 1985.

DAIRY

DAIRY HIGHLIGHTS

MILK COWS AND MILK PRODUCTION

Kentucky farms had a yearly average of 227,000 milk cows during 1986, down from 231,000 in 1985. The average annual production per cow was 10,251 pounds, up 632 pounds from the 1985 average. Total 1986 milk production at 2.33 billion pounds, increased from the 1985 level of 2.22 billion pounds. The average number of farms with milk cows was 8,000 during 1986, down 500 from 1985.

Kentucky's milk cows were fed 559,000 tons of feed and other concentrates in 1986, up one percent from 1985. This level averaged 4,920 pounds per cow or 48 pounds per cwt. of milk. In 1986 the average value of feed per cwt. was $7.17, down from 1985 ($7.62).

MILK DISPOSITION AND INCOME

Of the 2.33 billion pounds of milk produced during 1986, 2.22 billion pounds were sold to plants and dealers. The remaining 105 million pounds produced were used on farms as milk, cream and butter, and fed to calves and other livestock. Milk sold increased 5 percent and milk used on farms decreased 5 percent from 1985 levels.

The 2.22 billion pounds of milk marketed by Kentucky farmers consisted of 87 percent fluid grade milk and 13 percent manufacturing grade milk. Fluid grade deliveries during 1986 totaled 1.93 billion pounds, up 6 percent from 1985. Manufacturing grade milk marketings increased 3 percent over 1985 levels to 296 million pounds in 1986.

The 2.33 billion pounds of milk produced by Kentucky farmers during 1986 was valued at $293 million, based on the average return per hundredweight of milk sold plus the value of on-farm consumption. The value of milk produced in 1985 was $284 million.

Values of fluid grade ($12.90/cwt.) and manufacturing grade milk ($10.90/cwt.) combined for an average price of $12.60 for all milk sold during 1986 by Kentucky farmers. The average price for 1985 was $12.80. Cash receipts from all dairy products marketed by Kentucky farmers in 1986 totaled $280 million, up from $270.2 million in 1985.

MANUFACTURED DAIRY PRODUCTS

Total cheese production, excluding cottage cheese, in Kentucky plants during 1986 was 52.7 million pounds. Production in 1985 was 52.4 million pounds. Seven plants manufactured 34.3 million pounds of American type cheese in 1986, compared to 34.7 million pounds in 1985.

Kentucky's 26 plants produced a wide variety of manufactured dairy products, including numerous types of cheese, butter, frozen products, dry milk products, whey products, and condensed and evaporated milk. To avoid the disclosure of individual plant production, State figures for these commodities are not published.

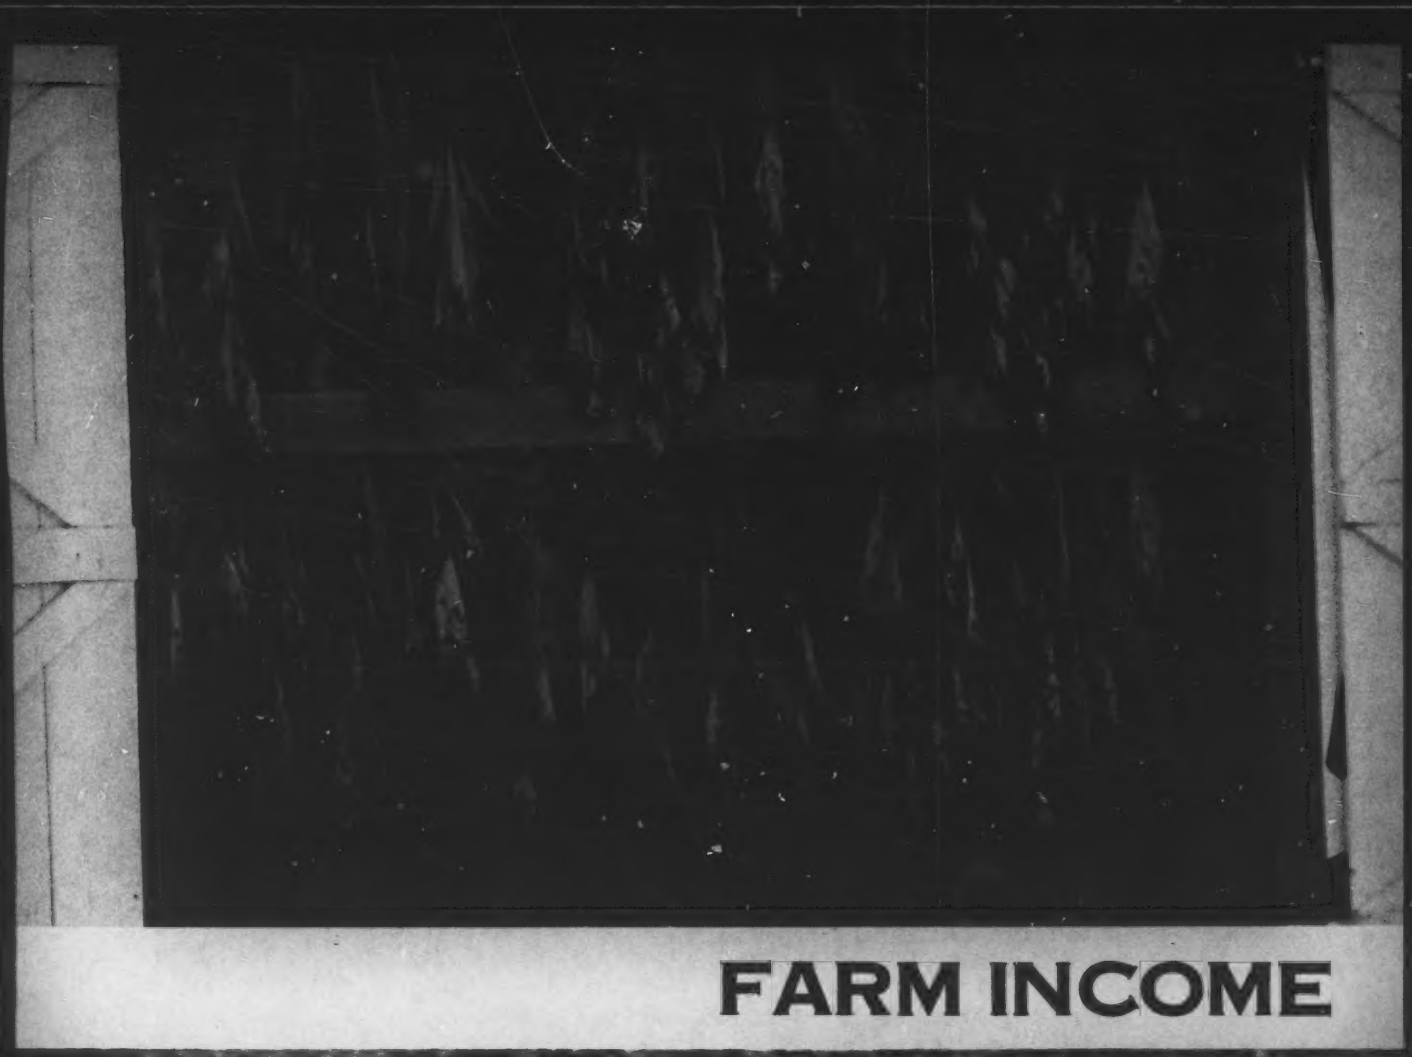
2/ - Excludes milk sucked by calves.
3/ - Rounded sum of individual states.



FARM INCOME

FARM INCOME HIGHLIGHTS

CASH RECEIPTS

Kentucky farm products sold during 1986 generated cash receipts of $2.39 billion, down 19 percent from 1985. Livestock and livestock products accounted for 54.9 percent of the total with crop sales making up 45.1 percent.

Crop cash receipts totaled $1.08 billion in 1986, down 32 percent from 1985. Tobacco receipts valued at $554 million, accounted for 23.2 percent of the total cash receipts. Tobacco was again the leading commodity in cash receipts. Vegetable receipts valued at $25.6 million, showed the largest gain over 1985 with a 42 percent increase. Corn, with receipts of $207 million, accounted for 8.6 percent of the total and was down 36 percent from 1985. Soybean cash receipts, valued at $191.7 million, accounted for 8.0 percent of the total cash receipts and decreased 26 percent from the previous year.

Livestock cash receipts in 1986 totaled $1.31 billion, down 3 percent from the year before. Livestock commodities showing an increase over 1985 were hogs 12 percent, wool 9 percent, dairy products and eggs 4 percent, and broilers 2 percent. Horse sales and stud fees totaled $450 million in 1986, down 13 percent from 1985. Horse receipts made up 18.9 percent of the total cash receipts for the State, second only to tobacco.

PRICES RECEIVED BY KENTUCKY FARMERS

Prices received by agricultural producers in Kentucky were generally lower for 1986 in comparison to the previous years. The only increase in 1986 market year average prices over 1985 were seen in prices received for hogs and eggs. Corn, for the 1986 marketing year, averaged $1.65 per bushel, down 72 cents from the 1985 market year average. Wheat prices averaged $2.45, down 45 cents from 1985, while soybeans were down 31 cents to $4.95 per bushel. The market year average price for hay dropped to $65.00 per ton, $3.50 lower than 1985. Burley tobacco for the 1986 marketing season averaged $1.568 per pound, down 31.6 cents per pound from the 1984 record high of $1.884. All of the dark tobaccos showed a decline in price from 1985 of 0.1 to 6.6 cents per pound.

Cattle prices were generally lower in 1986 on average than in 1985. Cow prices with an average of $33.90, were down $1.50 from 1985. Beef cattle averaged $45.90 per cwt., 50 cents below the 1985 average of $46.40. For 1986, steers and heifers were down 50 cents to $52.80 and calves averaged $57.30, unchanged from 1985. Milk cows with an average of $750.00 per head, were $25.00 lower than the 1985 average. Milk prices showed declines of 20 cents for fluid grade milk and 30 cents for manufacturing grade milk. Hog prices were up to $49.90 on average for the year, $5.10 above the previous year. Egg prices were 55.4 cents per dozen, up 3.7 cents from the 1985 level.

PRICES PAID BY KENTUCKY FARMERS

The trends in prices farmers paid for materials used in production during 1986 were mixed to mostly lower from a year earlier. Prices paid for farm supplies, farm machinery, fertilizer, pesticide materials, and motor supplies were mostly lower. Building materials were mostly higher than 1985. Gasoline at the pump was down 19 percent, bulk delivered was down 18 percent and diesel fuel was down 22 percent. Tires and batteries were down, while motor oils were mostly higher. Farm machinery was mostly lower with the exception of mowers, 5-bottom plows, and manure loaders and spreaders. Prices for feed were mixed. Soybean meal showed the largest increase, up 10 percent, and corn meal showed the largest decline, down 9 percent.

KENTUCKY CROP VALUES - 1986

The value of crops produced by Kentucky farmers in 1986 fell 28 percent from a year earlier to a total of $1.2 billion. Lower production of all major crops combined with lower prices caused the decline in value. No crop posted an increase in value of production.

Five major crops - tobacco, hay, corn, soybeans and wheat - accounted for 99.4 percent of the total value of all crops produced in 1986. Taken as a group, the value of these five crops fell 27 percent from 1985. Tobacco value fell 28 percent and, when combined with a 31 percent drop in 1985, is about half the value of production in 1984. Tobacco's share of Kentucky's total crop value fell slightly to 41.8 percent. Kentucky's tobacco crop accounted for 27.5 percent of the total U.S. tobacco value, up from 27.3 percent in 1985. Hay moved up into the second position in terms of crop value with 20.0 percent of the total, while corn slipped to third with 19.8 percent. Soybeans and wheat were again ranked fourth and fifth, respectively. Nationally, the leading crops in terms of value of production were corn, soybeans, hay, wheat, cotton, and tobacco. As a group, the value of production for these six crops fell 28 percent in 1986.

- Indicates less than .05%. Percent may not be accurate to .1 in last place because of method of machine computation. 1/Revised. 2/Preliminary. 3/Includes stud fees. 4/Forest products no longer included in farm cash receipts, but are included in net farm income.

CASH RECEIPTS BY COUNTY - 1985

For 1985 eleven Kentucky counties generated cash receipts from marketings in excess of $50 million each. Fayette continues to be the leading county with $259.3 million in receipts. It accounted for 9 percent of Kentucky's total cash receipts. Horse sales were the prime contributor to Fayette's total receipts with livestock sales and dairy productions making up $231.2 million of the total. Bourbon County continued to rank second in cash receipts with $130.8 million. Horse sales again were the most important commodity sold. The other nine counties with receipts of $50 million plus were Woodford, Shelby, Christian, Daviess, Logan, Scott, Barren, Graves and Union. The above eleven counties with $986.1 million in cash receipts made up 34 percent of Kentucky's 1985 cash income from farm marketings.

The five leading counties in livestock cash receipts were Fayette, Bourbon, Woodford, Scott and Shelby. These counties accounted for 37 percent of the State's livestock receipts. Horse sales accounted for the largest portion of receipts in Fayette, Bourbon, Woodford and Scott Counties with dairy products the largest in Shelby County. The number one livestock commodity sold in 1985 was horses and mules at $520.0 million, 38 percent of all receipts from the sale of livestock and livestock products. The number two commodity sold was cattle and calves with $395.3 million.

The five leading counties in crop cash receipts included Christian, Daviess, Logan, Graves and Henderson. These counties accounted for 15 percent of the State's crop receipts. In Daviess and Henderson Counties the leading commodity sold was corn, in Graves and Logan Counties it was soybeans, while in Christian County it was tobacco. Tobacco continues to be the number one crop commodity sold in Kentucky. Cash receipts from its sale totaled $857.8 million in 1985 and made up 54 percent of all receipts from the sale of crops. The number two commodity sold was corn with $324.5 million.

For individual commodities, the leading counties were:

Tobacco - Bourbon	Horses - Fayette
Corn - Union	Cattle - Barren
Soybeans - Logan	Dairy - Barren
All Hay - Shelby	Hogs - Union

COST OF PRODUCTION

FARM PRODUCTION EXPENDITURES

UNITED STATES

U.S. farm production expenditures totaled $106 billion in 1986, off 16 percent from the $126 billion in 1985. Increased expenditures for building and fencing items were more than offset by declines in all other expenses. Farm services, including rent, represented the largest expenditures for farmers accounting for 22 percent of the total. Feed expenses contributed 14 percent, interest 9.6 percent, and livestock and poultry expenses 9.5 percent of the total.

The Corn Belt Region had the largest total expenditure, accounting for 23 percent of the U.S. expenses, followed by the Northern Plains Region with 14 percent. Nine of the ten production regions reduced expenditures from a year earlier. The region with the sharpest decreases in total expenditures was the Southern Plains with a drop of 31 percent. The Southeast Region expenditures were unchanged from a year earlier.

Farms in the over $100,000 sales category accounted for 67 percent of the U.S. expenditures. The $40,000-$99,999 category was 17 percent of the total and farms with less than $40,000 sales 16 percent. Large farms accounted for more than two-thirds of all expenses for labor, livestock and poultry, feed, agricultural chemicals, farm supplies, seeds and plants, farm and land improvements, and fertilizer. The three major expenditure categories of farm services, feed, and farm machinery accounted for 48 percent of the total expenses for operations with sales over $100,000. For farms with sales between $40,000 - $99,999 and those less than $40,000, the three leading expenses were farm services, feed, and farm machinery.

APPALACHIAN REGION

Farm production expenditures totaled $6.8 billion for the Appalachian Region, 20 percent below the $8.5 billion in 1985. The Appalachian Region accounted for 6.4 percent of the U.S. expenditures. The average expenditure per farm in the Appalachian Region was $20,125 - down $4,159 from a year earlier. Expenditures for this Region averaged less than half of the National average of $47,976. Farm services ($3,936), feed purchases ($3,744), labor ($2,044), and livestock/-poultry purchases ($1,854) were the greatest expense items and accounted for over half of all expenses in 1986. Expenditures by livestock farms at $4.3 billion were 62 percent of the total regional expenses. Major expense items on livestock farms were feed (28 percent), farm services (16 percent), and livestock/poultry purchases (14 percent). Crop farm expenditures totaled $2.6 billion, 38 percent of the regional expenses. Greatest crop farm expenses were for farm services (25 percent), labor (14 percent), and fertilizer (11 percent).

1/Appalachian: KY, NC, TN, VA, WV. 2/Excludes Alaska & Hawaii. 3/Total expenditures divided by official number of farms published by NASS. 4/Totals may not add due to rounding. 5/Includes landlord expenditures. 6/Excludes veterinary supplies; bedding, litter, straw & etc; purchase of capital equipment; other non-capitalized equipment for livestock & poultry; and custom feeding of livestock on a per head or gain basis and grazing fees for livestock. Includes purchases and leasing expenses for all other livestock and livestock products (eggs, wool, milk & leasing of livestock). 7/Includes custom feeding of livestock on a per head or gain basis and grazing fees for livestock. 8/Includes veterinary supplies. 9/Includes: tractors, other farm machinery, self-propelled machinery, fertilizer & irrigation equipment, trucks, autos & other motor vehicles (leased or rented). 10/Excludes telephone and water, but includes irrigation water cost and fees for 1985. 11/Excludes seed treatment. 12/Includes materials and applications. 13/Includes bedding, litter, straw & etc.; other non-capitalized equipment for livestock & poultry. Excludes power farm shop equipment and motor supplies. 14/Includes repair and maintenance of livestock & poultry equipment and motor supplies. 15/Includes other motor vehicles purchased. 16/Includes purchase of capital equipment for livestock and and poultry. 17/Includes power farm shop equipment. 18/Excludes bedding plants, nursery stocks and seed purchased for resale. 19/Includes seed treatment. 20/Excludes other motor vehicles purchased.

sources for 1978 and later are not directly comparable with those of earlier years. 4/Uses different data sources for periods before 1979, 1979-1983, and 1984 and later. Estimates are not directly comparable among periods. 5/Includes operator households.

1985 COST OF PRODUCTION

Cost of production estimates for the 1985 corn, soybeans and wheat crops show cash receipts well below production costs for all three commodities. The estimates assembled by USDA's Economic Research Service, reflect average costs reported in a survey of farm operators covering the 1985 crop. An individual's cost of production may vary considerably from these estimates depending on the structure of the individual's farm operation. For example, interest charges could be deleted if no money is borrowed for operating expenses or land charges could be dropped if the land is "paid off". Taxes, insurance, overhead and other items vary greatly from operation to operation. The operator's labor is included in the labor costs item and equipment depreciation is accounted for in capital equipment replacement costs. A closer estimate of an individual farm's costs of production can be determined by substituting the farm's actual costs for the estimates given in the tables. The University of Kentucky Cooperative Extension Service and county agents can assist farmers in developing cost of production budgets for their operations.

1985 CORN FOR GRAIN

Harvest-period Price ($/bushel)	$2.23
Yield (bushel/planted acre)	101.18 BU

MISCELLANEOUS

FARM NUMBER HIGHLIGHTS

The number of farms in Kentucky in 1987 is estimated at 99,000, the same level as in 1986. This is the lowest level on record, but still ranks the Commonwealth fourth Nationally. The only States with more farms than Kentucky are Texas (160,000), Missouri (114,000) and Iowa (107,000). A farm is defined as a place that sells or could sell $1,000 of agricultural products during the year. Land in Kentucky farms has remained stable at 14.5 million acres since 1982. The approximate total land area of Kentucky is 25.4 million acres, therefore, land in farms accounts for 57 percent of the total. The 1987 average size of Kentucky farms is 146 acres.

Farm numbers in the United States in 1987, estimated at 2.17 million, are down 2 percent from the 2.21 million in 1986 and down 11 percent from the 2.43 million in 1980. Total land in farms for 1987 is estimated at 1.00 billion acres, down one percent from a year earlier. Land in farms has declined every year since reaching its peak of 1,206 million acres in 1954. The average farm size in the United States increased to 461 acres, up 5 acres from 1986.

BEES AND HONEY

Honey estimates were reinstated during 1986 on an annual basis following a four year period with no estimates.

Honey production in the United States during 1986 for producers with five or more hives amounted to 200 million pounds. The yield per colony was 62.5 pounds. Conditions for production ranged from very poor with no surplus honey to excellent. Stocks on hand were 27.2 million pounds or 13.6 percent of production. The four largest honey States produced 103 million pounds, 51 percent of U.S. total.

Prices for the 1986 honey crop averaged 51.3 cents per pound. Prices are based on sales to private processors, and co-ops, and on retail sales by producers. Higher prices for the amber honeys reflect the largest proportion of retail sales relative to the white honey classes. All government payments and loans are excluded.

Honey production in Kentucky during 1986 totaled 225,000 pounds. Yield per colony was 15 pounds. Conditions for production were not favorable in many areas due to spring freeze and dry weather. Stocks on hand totaled 86,000 pounds.

KENTUCKY NUMBER OF COLONIES, PRODUCTION, STOCKS AND VALUE 1970 - 1986 1/

Year	Number of Colonies	Yield Per Colony	Production	Stocks Dec. 15	Average Price Per Pound	Value of Production

1/Data collected by Division of Regulatory Services, Agricultural Experiment Station, Lexington, Kentucky. Fertilizer sold as straight materials and miscellaneous products based on tonnage reports from manufacturers. 2/Includes superphosphate and triple superphosphate. 3/Includes minor nutrients, filler when reported separately & other fertilizers of unspecified composition.

FARM EXPORTS

Value of agricultural exports from the United States decreased 16 percent from a year earlier for Fiscal Year ending September 30, 1986. Total value is down 31 percent from 1984 and 40 percent from the peak of FY 1981. However, despite a rather sluggish start for FY 87, value of exported agricultural products is now forecast to be up 5 percent and export volume is expected to climb 16 percent. Grains account for virtually all of Fiscal 1987's expected rise in volume as U.S. loan rates and initiatives under the Export Enhancement Program increase U.S. competitiveness. However, with lower prices offsetting virtually all of the expected volume gains in grains, livestock, horticultural, and cotton exports are expected to account for most of Fiscal 1987's expected gain in value.

Kentucky exports in FY 86 declined 5 percent. Tobacco and live animals (including horses) were the leading commodities. Kentucky ranked number 2 in tobacco and number 3 in live animals and meat among all States. California was the number one exporting State for the second consecutive year. California exports totaled $2.4 billion with fruits ($739 million), nuts ($466 million) and vegetables ($416 million) accounting for 67 percent of the State's exports. Other States with over a billion dollars worth of agricultural exports were Illinois ($2.2), Iowa ($2.1), Kansas ($1.5), Nebraska ($1.5), Texas ($1.5), Minnesota ($1.3), Indiana ($1.1), and North Dakota ($1.0 billion).

COUNTY SUMMARY

COUNTY DATA

The following section highlights each county in Kentucky. Crops produced, livestock inventories, milk production and agricultural cash receipts are displayed with the appropriate rank among all counties. Data published here are available elsewhere in this bulletin, but this should aid data users interested in certain counties. Also, included for each county are the most current agricultural census data (1982) for number of farms, land in farms and harvested cropland acres.

Below is a table with data for the entire State. On succeeding pages each county is listed alphabetically. If you have any questions on this section, please get in touch with us.

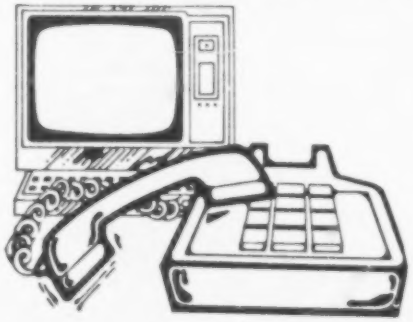
Welcome to FARMLOT
1-800-327-6568

FARMLOT is a new, free marketing service of the Kentucky Department of Agriculture. It is available 24 hours a day to persons across the Commonwealth who are interested in buying and/or selling farm commodities, in any amounts, as well as receiving regional up-to-date farm market prices.



Here's how it works:

- The caller, using a touch-tone telephone, will dial 1-800-FARMLOT, (1-800-327-6568).
- The computer will answer the phone and give the caller three options: To buy, to sell or to access market news.
- Information for buying or selling can be obtained statewide or by county. If the caller chooses to hear information by county, he will be asked to use the county codes listed below.
- The caller will be told which numbers on his telephone to touch in order to either gain the information he wants or to impart information about goods he wants to buy or sell.
- Should the caller encounter a problem, or need to give the computer further information, instructions will be issued on how to have that information or request recorded.

Commissioner David E. Boswell
Kentucky Department of Agriculture

A MESSAGE FROM KENTUCKY AGRICULTURE COMMISSIONER DAVID BOSWELL:

"It's my great pleasure to introduce FARMLOT, the telephone-computer system which I believe will significantly help open up marketing opportunities for Kentucky farmers and those who buy the commodities our farmers produce. FARMLOT puts buyers and sellers together and imparts accurate, up-to-date and regional livestock and grain market reports as well. FARMLOT's success will depend a great deal upon getting information about the program into the hands of potential users. To that end, user cards will be distributed to local offices of Farm Bureau, Farmers Home, ASCS and Ag Extension, as well as groceries, restaurants, service stations and seed, feed, fertilizer and farm equipment stores across the Commonwealth. . .wherever farmers and those who do business with them gather. Please feel welcome to use FARMLOT, and please tell your friends about it."

STATISTICAL REPORTS PROGRAM

In addition to this Annual Bulletin the Kentucky Agricultural Statistics Service publishes timely estimates on crop and livestock production, prices and various other special reports. A list of the more important reports and the approximate date of release is shown in the table below. Many of these reports are combined and republished in the twice-monthly Kentucky AGRI-NEWS. Due to budget restraints, there is a minimal charge for the AGRI-NEWS and Crop-Weather for non-reporters. Current reporters may receive these reports without charge. These reports may be obtained from the Kentucky Agricultural Statistics Service, P.O. Box 1120, Louisville, Kentucky 40201. PHONE: (502) 582-5293.

TYPE OF REPORT	FREQUENCY OF REPORT	APPROXIMATE DATE AVAILABLE
I. CROP REPORTS		
1. Intentions to Plant	Annually	March 31
2. Production of Field Crops & Fruits	Monthly (In Season)	10th - 12th
3. Grain Stocks	Quarterly	Jan 15; Mar 31; Jun 30; Sep 30
4. Annual Crop Summary	Annually	January 15
